ZENG, YUKUN

+1 (979)739 9315 ◇ yzeng@tamu.edu

1600 Southwest Pkwy APT 1301 ◇ College Station, TX 77840, U.S.

OBJECTIVE

Seeking a software engineer intership for 2017 summer.

EDUCATION

Texas A&M University College Station, TX

Master of Science in Computer Science *Expected Graduation: May, 2018*

GPA: 3.67/4.00

Harbin Institute of Technology Weihai, China

Bachelor of Engineering in Software Engineering *Sep. 2012–July 2016*

GPA: Overall 3.45/4.00, Major 3.70/4.00

EXPERIENCE

Graduate Researcher College Station, TX

Parasol Lab, supervised by Prof. Nancy M. Amato *Sep. 2016 - Present*

- Developed a self-motivated Robotics Motion Planner with Midpoint Guided Sampling
- Researching on simulating robot group behavior, e.g., Multi Robot Persistent Coverage Problem simulation

Grader College Station, TX

CSCE 410 Operating Systems, Prof. Dilma Da Silva *Sep. 2016 - Present*

- Developed test case for grading projects, built automated testing environment, answered students' questions

Software Engineer Intern Shenzhen, China

ARRIS Group *Jan. - May 2016*

- Benchmarked network performance of our product to track performance bottlenecks and improve modem bandwidth
- Revised routing architecture to achieve proper LAN connectivity and meantime ensure overall security

Co-Chair Weihai, China

HIT Robot Innovation Workshop *May 2015 - Jan. 2016*

- Led the development of two competition projects in National Robot Championship
- Used RoboBasic to develop a matrix approach of stable robot gait planning for RoboNova series robots

SELECTED PROJECTS

Mobile Storm: Distributed real-time stream processing for mobile cloud Research Assistant

- Proposed greedy and genetic algorithms for job topology allocation on multi workers with varying executors (NP-Hard), generally yields results within 30% gap comparing to near-optimal solution (CPLEX) but runs 100x faster
- Developed a Neural-like topology generator for job submission simulation to test our allocation algorithm
- Working on distributed streaming face recognition applications for real-world application experiments

High-responsive scheduling for heterogeneous Hadoop YARN cluster Research Assistant

- Developed a cloud computing benchmark suite to test performance of heterogeneous Hadoop YARN cluster running multi frameworks like MapReduce, Spark, etc
- Proposed a novel job size prediction approach based on Machine Learning techniques and designed a size-based scheduling framework, which substantially improved the responsiveness of Hadoop cluster

Flash Vocabulary - Lightweight website for boosting vocabulary online Leader

- Devised a novel MVC-derived pattern that best fits the interaction mode of our website
- Developed a comprehensive front-end framework to simplify front-end codes and create a universal UI
- Adopted AJAX and HTML5 Local Storage to avoid unnecessary reloading and enhance user experience

Jizhi Tutor Service - Online edu platform on Cloud Co-Leader

- Applied HTML, CSS, Javascript (JQuery) to the front-end dev, used complex SQL Server database (with triggers, view, stored procedure, etc) and .NET platform for data storage and business logic

- Lead the entire platform dev from designing, implementation to Cloud deployment and maintenance

General Coding - An APP to improve programmers' productivity　　　　　　　　Key Developer

- Developed the APP which highlights on improving user experience by optimizing data structure and algorithms, extensible to multi programming language API integration
- Implemented an objective linked-list and fuzzy query algorithm (Levenshtein Distance) in our Full-Text Inter-PL (Programming Language) API search engine

HONORS&AWARDS

Best Paper Award for Outstanding Bachelor Dissertation	July 2015
Meritorious Winner(1st Prize) in National Robot Championship	July 2015
Honorable Mention in Mathematical Contest in Modeling (MCM)	Apr. 2015
2nd Place in HIT Software Design Competition	Mar. 2014
People's Scholarship 5 times	Oct. 2013, Oct. 2014, May 2015, Oct. 2015, Apr. 2016
